

What's New from KV

KNAPE & VOGT MANUFACTURING CO. 2700 OAK INDUSTRIAL DR. NE GRAND RAPIDS MI USA 49505 1.800.253.1561 WWW.KV.COM

Drawer Slide Rebrand is Powered by KV Name and Market Prominence

KV has rebranded three of our drawer slide sub-brands under the Knap & Vogt name. The medium-duty imports GSlide®, Tru-Trac® and DuriSlide™ now are now sold under the KV brand, extending our good name and the full range of Knap & Vogt design, manufacturing and service support to those slides.

Four brands to meet your requirements for performance and value

The KV® brand is the slide of enduring choice among builders of premium quality cabinetry, furniture and equipment. The three KV sub-brands include:

Our best-in-class ball-bearing import slide, manufactured by KV Asia in Taiwan and favored by cabinet makers with cost sensitive projects.

An import built for economy and performance aimed at value-conscious professionals.

An economy grade slide engineered to compete with today's value-priced slides.

Knap & Vogt offers a wide variety of ball-bearing, undermount and roller slides in a range of styles, capacities, lengths and finishes. Purchase: Through hardware distributors, at retail outlets and online.

Coming soon! MuV+

The Next Evolution in Undermount Slide Technology

The next generation of MuV undermount slides, MuV+, is coming soon. MuV+ 75 lb. class and MuV+ HD 120 lb. class slides raise the bar for undermount function with a soft close action that is quieter than ever, smooth operation that is unmatched in the industry and more post-installation adjustment options.

How MuV+ is so quiet and other new features

KV has **redesigned the pivoting latch** in our patented soft-close module with a **cushioning polymer** that significantly increases sound dampening for a close that's almost beyond quiet – making MuV+ arguably the quietest undermount slide on the market today.

The MuV+ patented soft-close module has been updated to allow **adjustment of the pull-force** if needed to maintain that smooth, easy operation that is unequaled among our competitors.

MuV+ is more flexible and forgiving with **three new release levers** for making adjustments on installed drawers.

- The 1D lever offers **height** adjustment.
- The 2D lever offers **side-to-side** in addition to **height adjustment**. For more side-to-side adjustment, an adjustment float has been integrated into the rear of the slide member.
- The 3D lever offers **height, side-to-side** and **in-and-out** adjustments to align drawer fronts flush with the cabinet face.

MuV+ and MuV+ HD slides feature other improvements as well, including bottom mounting holes for flat-surface mounting. These enhancements only add to MuV's best-in-industry reputation for economy, stability, adjustability and flexibility.

Romancing the barn door with new KV sliding door hardware

Late last year we entered a sizzling HOT market with a broad collection of sliding door hardware for **interior barn doors** in styles ranging from rustic to contemporary. It's an extension of our sliding door hardware line and tracks with home trends toward space-saving and making more out of less.

Our collection includes:

- **Stainless steel round rail.** Six carrier styles, including options for glass or wood. Complete kits include the rail, carriers and all mounting hardware.
- **Stainless steel flat rail.** One unique carrier style for wood doors. The complete kit contains the rail, carriers and all mounting hardware.
- **Aluminum round track.** Eight carrier styles available in complete kits with all necessary mounting hardware. Tracks in three lengths sold separately.
- **Aluminum flat rail.** Four carrier styles available in complete kits with all necessary mounting hardware. Tracks in three lengths sold separately.

Applications are practically endless with designers using interior barn doors in lofts and offices; hotel closets and bathrooms; bedrooms with en suite bathrooms; dividing kitchen from pantry; laundry room; enclosures for wall-mounted TV.

New this fall:

8600 Series drawer slide for wider, deeper drawers

The new 8600 Series is a 150-lb. class heavy-duty slide designed on a 1/2" slide profile to accommodate the wide, deep drawers in demand in today's residential and commercial furniture markets.

Larger drawers are more and more popular as homeowners seek to use every bit of available space for storage. Wide, deep drawers can hold almost anything and everything in the kitchen, prompting a trend away from less accessible (and back-straining) fixed-shelf storage to deep (24") drawers on full-extension slides. Deep pot and pan drawers built into kitchen islands are just one example.

Two models – the 8600 full extension and 8605 over travel – are available in sizes from 12" to 28" for use with drawers up to 32" wide. The 3-member telescopic-action slide has a double wrapped center member for added strength and capacity, yet it retains the 1/2" clearance cabinet makers want (vs. up to 3/4" clearance found with most heavy-duty slides).
